

## **EIC Awarded Green Partner Certificate from Sony**

EIC, the international supplier of high performance discrete semiconductors, has been awarded 'Green Partner' status by Sony Corporation. This certificate recognises EIC's commitment to environmental concerns and is only awarded to companies that have a well controlled environmental management system in place. EIC was one of the first diode manufacturer to offer RoHS compliance for all of its products as standard.

Sony sees global environmental conservation as one of the most critical issues for mankind in the 21st century and established the Sony Green Partner Standards in July 2001. Under this program, Sony auditors visit suppliers to check environmental management activities. If suppliers meet Sony's standards, they qualify as Green Partners. Green Partner suppliers are required to work continuously to maintain and upgrade their environmental management systems.

*EIC is a major international manufacturer and supplier of high quality discrete semiconductors. With over 10,000 parts and more than 50 package types, EIC offers one of the most comprehensive diode portfolios in the industry. EIC provides its customers with world-class service and technical support, which is driven from its headquarters in Bangkok, Thailand.
